Capability Statement

Service Robot Co. deploys robotic systems, sensing, and automation for commercial, industrial, and public-sector operations — from site assessment through lifetime support.

Service
Robot Co.

CORE CAPABILITIES

Robotics & Automation

Cleaning, delivery, AMR, palletizing, welding, inspection, cobots, humanoid, and industrial arm systems.

Security & Sensing

Mobile trailers, fixed and thermal cameras, radar, perimeter sensing, edge analytics, and video management.

Aerial Systems

Enterprise drones, automated docks, thermal payloads, inspection routes, wildfire detection, and mapping.

Solar Construction & Maintenance

Autonomous pile driving, module transport, panel-cleaning robots, thermal inspection, and post-event assessment.

Integration & Connectivity

System design, data architecture, local compute, storage, control software, and third-party integrations.

Training & Workforce

Operator and administrator training, documentation, procedures, credentialing, and ongoing skills development.

DIFFERENTIATORS

- ✓ **Full deployment ownership.** One partner from site assessment through commissioning, training, and ongoing support — not a reseller handoff.
- ✓ **Vendor-neutral equipment selection.** We select the right machine for the job, not the machine we manufacture.
- ✓ **Customer-controlled data.** Every deployment documents what is collected, where it goes, and who has access. On-premises options where the use case requires it.
- ✓ **Nationwide service network.** Remote triage, field dispatch, and emergency response across multiple U.S. locations.

DEPLOYMENT MODEL

Assess the work → **Design** the system → **Prove** it on site → **Deploy** and integrate → **Train** the team → **Support** the operation
